General Search Guidance

As general guidance, a complete search of the subject matter in this art area will include the following:

1. A classified search of the original classification class and subclass for the subject matter and the other highly relevant art areas in the US patent documents
2. A text search of the US patent documents; patents, PG PUB, and OCR databases
   - o Broad text search for the general inventive concept(s), not limited by classification
   - o Narrow text search for the specific claimed invention
   - o Boolean text search employing the relevant inventive terms
3. A search of the foreign patent documents, JPO, EPO, and World patents by a text search appropriate for abstract databases
4. A NPL search of the highly relevant databases
   - o Text search using care to distinguish between proper queries for full or abstract databases
   - o Other special databases as designated, if any

Additional searching may be appropriate at the professional discretion of the searcher. This search is normally expected to be completed prior to the indication of allowable subject matter; but is not per se required where the claimed and disclosed subject matter may not be appropriate for search in one or more resources. Further, for any additional appropriate databases for searching, the searcher may consult with the Electronic Information Center (EIC) in the Technology Center.

Field of Search

"When determining the field of search, three reference sources must be considered-domestic patent documents, foreign patent documents, and nonpatent literature (NPL). None of these sources can be eliminated from the search unless the examiner has and can justify a reasonable certainty that no references, more pertinent than those already identified, are likely to be found in the source(s) eliminated." (MPEP)

U. S. PATENT RESOURCES

EAST/WEST

EAST Coverage: 1971 - present, Full Text: 1971 - present
WEST Coverage: 1971 - present, Full Text: 1971 - present

Full text patent and inventor searching.

Text search is the most useful search for this class because art can be found in many areas outside of 705. Text searching often involves the use of multiple synonyms and several concepts. Classification search can be used to limit search results. Inventor and/or assignee search can be helpful. Backward and forward citation searching has proven to be useful for this class.

BRS Search/USOCR Database

EAST Coverage: 1920 - 1970, Full Text: 1920 - 1970
WEST Coverage: 1920 - 1970, Full Text: 1920 - 1970

Full text of U.S. patent grants.

Text search is the most useful search for this class because art can be found in many areas outside of 705. Text searching often involves the use of multiple synonyms and several concepts. Classification search can be used to limit search results. Inventor and/or assignee search can be helpful.

PGPUBS
EAST Coverage: 2001 - present, Full Text: 2001 - present
WEST Coverage: 2001 - present, Full Text: 2001 - present

U.S. published applications.

Text search is the most useful search for this class because art can be found in many areas outside of 705. Text searching often involves the use of multiple synonyms and several concepts. Classification search can be used to limit search results. Inventor and/or assignee search can be helpful.

FOREIGN PATENT RESOURCES

Search separately from the US Patent Search. These databases consist of abstract documents. Text searching abstracts requires the use of different search logic e.g. the use of broad Boolean and/or operators instead of narrow proximity operators.

Derwent World Patents Index, Classification and Text Search
EAST Coverage: 1963 - present, Full Text: - N/A
WEST Coverage: 1963 - present, Full Text: - N/A

English abstracts database of patent documents from more than 40 patent-issuing authorities.

This resource is used for text searching.

EPO Abstracts, Text and Classification Search
EAST Coverage: 1978 - present, Full Text: - N/A
WEST Coverage: 1978 - present, Full Text: - N/A

English abstracts database of patents and published applications from EPO, WO/PCT, United Kingdom, France, Germany, and Switzerland. USPC searching is limited to documents added to the database from 1978 to September 30, 1995.

This resource is used for text searching.

EPO esp@cenet
esp@cenet Coverage: 1920 - present, Full Text: 1920 - present

National patent information from all member states of the EPO as well as bibliographic data from patents worldwide.

This resource is used for document retrieval.

European Patents Fulltext
Dialog Coverage: 1978 - present, Full Text: 1986 - present
STN Coverage: 1978 - present, Full Text: 1987 - present

Covers all European patent applications and granted European patents published since the opening of the European Patent Office (EPO) in 1978, and bibliographic records for PCT (Patent Cooperation Treaty) applications transferred to the EPO.

Titles are available in three languages. English abstracts are added to German and French documents within several weeks of their addition to the database. Searched as part of the Business Methods template.

FPAS3
Coverage: - , Full Text: -

USPTO foreign patent document retrieval system.

JPO Abstracts, Text and Classification Search
EAST Coverage: 1976 - present, Full Text: - N/A
WEST Coverage: 1976 - present, Full Text: - N/A

English abstracts database of Japanese published unexamined applications. USPC searching is limited to documents added to the database from 1978 to September 30, 1995.

This resource is used for text searching.

JPO Industrial Property Digital Library
NCIPI Coverage: 1976 - present, Full Text: 1976 - present

Japanese patent information.

This resource is used for document retrieval.

WIPO/PCT Patents Fulltext
Coverage: 1978 - present, Full Text: 1978 - present
STN Coverage: 1978 - present, Full Text: 1978 - present

Full text Patent Cooperation Treaty (PCT) published applications.

This database covers the full text of PCT (Patent Cooperation Treaty) published applications issued under the auspices of the World Intellectual Property Organization (WIPO). Searched as part of the Business Methods template.

NON-PATENT LITERATURE RESOURCES

The resources listed are those that USPTO staff have found consistently yield the most relevant search results. Commercial databases available through a single vendor can generally be searched simultaneously, although it is preferable to search full text and bibliographic databases in separate groupings. In addition to the use of subscription databases and public Internet sites, it is recommended that books, manuals, standards and specifications be considered in the search for prior art. The links in the Resource Description section lead to:

- Database search help sheets for databases requiring training and passwords
- Databases themselves when access is governed by IP address
- Internet sites available to the public (USPTO "Rules of the Road (PDF Doc)")
- Book and journal records via the Scientific and Technical Information Center's (STIC) online catalog

EIC 3600 staff performs NPL searches and helps examiners who need NPL search assistance. For suggestions on additional NPL resources to search, contact EIC3600.

ABI/INFORM
Dialog Coverage: 1971 - present, Full Text: 1991 - present
STN Coverage: 1971 - present, Full Text: 1991 - present

Covers worldwide business and management issues.

Includes details on various aspects of business, including company histories, competitive intelligence, and new product development.

ACM Digital Library
ACM Coverage: Dates - vary, Full Text: Dates - vary

Citations and full text articles from ACM journals, newsletters, and conference proceedings.

Business & IndustryTM (B&I)
Dialog Coverage: 1994 - present, Full Text: 1994 - present

Facts, figures, and key events dealing with public and private companies, industries, markets products for all manufacturing and service industries at an international level.

Business Wire
Dialog Coverage: 1999 - present, Full Text: 1999 - present

Full text of news releases issued by approximately 10,000 corporations, universities, research institutes, hospitals, and other organizations.

CSA Aerospace & High Technology Database
Dialog Coverage: 1962 - present, Full Text: - N/A
STN Coverage: 1962 - present, Full Text: - N/A

Provides references, abstracts, and controlled-vocabulary indexing of key scientific and technical documents.

Provides access to key scientific and technical documents covering aerospace R&D in over 40 countries.

Dialog Global Reporter
Dialog Coverage: 1997 - present, Full Text: 1997 - present

Global news source.

Covers newspapers, business magazines, and newswires from all regions of the world, including emerging markets. This resource may provide unique relevant information.

Dictionary.com
Lexico Publishing Group, LLC Coverage: - N/A, Full Text: - N/A

Multi-source dictionary search service.

Using a variety of dictionaries and encyclopedias can be useful in clarifying terminology.

Dissertation Abstracts Online
Dialog Coverage: 1861 - present, Full Text: - N/A
STN Coverage: 1861 - present, Full Text: - N/A

Subject, title, and author guide to virtually every American dissertation accepted at an accredited institution.

Dissertations and Theses - Full Text
ProQuest Coverage: 1861 - present, Full Text: Dates - vary

Doctoral dissertations and Master's theses.

EBSCO Coverage: Dates - vary, Full Text: Dates - vary

Multi-source database of business, technical, and trade periodicals.

European Newspapers
Dialog Coverage: Dates - vary, Full Text: Dates - vary

OneSearch category.

This resource contains abstracts and full text of major European newspapers, which can be useful for covering local contests and other international news stories.

Financial Times
Dialog Coverage: 1982 - present, Full Text: 1982 - present

Daily newspaper of global affairs.

Gale Group Computer DatabaseTM
Dialog Coverage: 1983 - present, Full Text: 1988 - present

Information about the computer, electronics, and telecommunications industries.

Gale Group GlobalbaseTM
Dialog Coverage: 1986 - 2002, Full Text: - N/A

Worldwide coverage of companies, products, and industries with a primary focus on Europe.

Gale Group Marketing & Advertising Reference Service
Dialog Coverage: 1984 - present, Full Text: 1984 - present

Multi-industry advertising and marketing database with abstracts and full text records on a wide variety of consumer products and services.

Gale Group New Product Announcements/Plus (NPA/Plus)

Dialog Coverage: 1985 - present, Full Text: 1985 - present

Full text press releases from all industries covering announcements related to products, with a focus on new products and services.

Gale Group Newsletter DatabaseTM

Dialog Coverage: 1988 - present, Full Text: 1988 - present

Full text of specialized industry newsletters that provide information on companies, products, markets, and technologies.

Gale Group PROMT

Dialog Coverage: 1990 - present, Full Text: 1990 - present
STN Coverage: 1978 - present, Full Text: 1978 - present

International coverage of companies, products, markets, and applied technologies for all industries.

Gale Group Trade & Industry DatabaseTM

Dialog Coverage: 1976 - present, Full Text: 1976 - present

Coverage of over 65 major industries, including full text coverage of management, economic, and other professional journals.

Inside Conferences

Dialog Coverage: 1993 - present, Full Text: - N/A

Contains details of all papers given at every congress, symposium, conference, exposition, workshop, and meeting received at the British Library Document Supply Centre.

Inspec (The Database for Physics, Electronics and Computing)

Dialog Coverage: 1898 - present, Full Text: - N/A
Dialog DataStar Coverage: 1898 - present, Full Text: - N/A
Questel Orbit Coverage: 1969 - present, Full Text: - N/A
STN Coverage: 1898 - present, Full Text: - N/A

Inspec (The Database for Physics, Electronics and Computing) corresponds to the three Science Abstracts print publications: Physics Abstracts, Electrical and Electronics Abstracts, and Computer and Control Abstracts.

Internet and Personal Computing Abstracts

EBSCO Coverage: 1980's - present, Full Text: - N/A

Literature related to personal computing products and developments in business, the Internet, the home, and all other applied areas.

Journal of Commerce

Dialog Coverage: 1987 - present, Full Text: 1987 - present

Provides the complete text of all news, columns, editorials, briefs, calendar listings, and selected tables that appear in the Five-Star edition of the business newspaper covering international trade and transportation issues.

JSTOR Journals

JSTOR Coverage: Dates - vary, Full Text: Dates - vary

Business collection brings together core titles in economics and finance, including many publications from the leading scholarly societies.

McGraw-Hill Companies Publications Online

Dialog Coverage: 1985 - present, Full Text: 1985 - present

Provides the complete text for many major McGraw-Hill publications.

The database covers specific industries such as aerospace, electronics, and construction.

New York Times

Dialog Coverage: 1980 - present, Full Text: 1980 - present

New York Times full text database.

NTIS: National Technical Information Service

Wilson Applied Science & Technology Abstracts
Dialog Coverage: 1983 - present, Full Text: - N/A

Science and technology journal abstracts.

INTERNET SEARCH TOOLS

An Internet search should be considered when a search of the other resources listed in this template fail to locate relevant prior art. Consideration must be given to the guidance provided in the Rules of the Road (PDF DOC) for Internet searching for patent applications.

Google Scholar

Google Coverage: - N/A, Full Text: - N/A

Scholarly literature, including peer-reviewed papers, theses, books, preprints, abstracts and technical reports from all broad areas of research.

Used to find scholarly materials on the Internet. Can pull up theses, and articles by applicant name.

Internet Archive

Internet Archive Coverage: - N/A, Full Text: - N/A

Provides permanent access to historical collections that exist in digital format.

Used to date web pages, and to identify companies that were using something similar to the invention years ago.

For comments and suggestions, contact Karen Lehman at 571-272-3496.

Please obey USPTO "Rules of the Road (PDF Doc)"
when using Internet resources.

If you cannot access a file because of a missing or non-working plugin, please contact the Help Desk at 2-9000 for installation assistance.

General Search Guidance

As general guidance, a complete search of the subject matter in this art area will include the following:

1. A classified search of the original classification class and subclass for the subject matter and the other highly relevant art areas in the US patent documents
2. A text search of the US patent documents; patents, PG PUB, and OCR databases
   - o Broad text search for the general inventive concept(s), not limited by classification
   - o Narrow text search for the specific claimed invention
   - o Boolean text search employing the relevant inventive terms
3. A search of the foreign patent documents, JPO, EPO, and World patents by a text search appropriate for abstract databases
4. A NPL search of the highly relevant databases
   - o Text search using care to distinguish between proper queries for full or abstract databases
   - o Other special databases as designated, if any

Additional searching may be appropriate at the professional discretion of the searcher. This search is normally expected to be completed prior to the indication of allowable subject matter; but is not per se required where the claimed and disclosed subject matter may not be appropriate for search in one or more resources. Further, for any additional appropriate databases for searching, the searcher may consult with the Electronic Information Center (EIC) in the Technology Center.

Field of Search

"When determining the field of search, three reference sources must be considered-domestic patent documents, foreign patent documents, and nonpatent literature (NPL). None of these sources can be eliminated from the search unless the examiner has and can justify a reasonable certainty that no references, more pertinent than those already identified, are likely to be found in the source(s) eliminated." (MPEP)

U. S. PATENT RESOURCES

This resource contains abstracts and full text of major US newspapers.

Wall Street Journal Abstracts
Dialog Coverage: 1973 - present, Full Text: - N/A

Contains abstracts of all articles published in the Eastern 3-star Edition of The Wall Street Journal newspaper.

Wilson Applied Science & Technology Abstracts
Dialog Coverage: 1983 - present, Full Text: - N/A

Science and technology journal abstracts.

INTERNET SEARCH TOOLS

An Internet search should be considered when a search of the other resources listed in this template fail to locate relevant prior art. Consideration must be given to the guidance provided in the Rules of the Road (PDF DOC) for Internet searching for patent applications.

Google Scholar
Google Coverage: - N/A, Full Text: - N/A

Scholarly literature, including peer-reviewed papers, theses, books, preprints, abstracts and technical reports from all broad areas of research.

Used to find scholarly materials on the Internet. Can pull up theses, and articles by applicant name.

Internet Archive
Internet Archive Coverage: - N/A, Full Text: - N/A

Provides permanent access to historical collections that exist in digital format.

Used to date web pages, and to identify companies that were using something similar to the invention years ago.

For comments and suggestions, contact Karen Lehman at 571-272-3496.

Please obey USPTO "Rules of the Road (PDF Doc)"
when using Internet resources.

If you cannot access a file because of a missing or non-working plugin, please contact the Help Desk at 2-9000 for installation assistance.

Alerting Abstract WO A1

NOVELTY - A consumer identification data included in SS7 signaling message received from a mobile consumer through an integrated services digital network (ISDN), is substituted in the network with an **alias** so as to anonymize the **consumer** 's request. The identification data is not accessible to content or service provider and there is one-to-one and immutable correspondence between the identification data and the alias.

DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

1.Arrangement for interacting with consumer; and

2.Method of allowing mobile consumer to define his preferences for anonymous service, through internet.

USE - For establishing anonymous profile of consumers, for **preparing** precisely **targeted** one-to-one **marketing** campaigns, using SS7 signaling message received from mobile communication devices such as mobile phone, PDA, palmtop or laptop computers through ISDN.

ADVANTAGE - As multiple customers share the same content of service provider, the interaction of the consumers can be aggregated and leveraged even if the corresponding products and services are independent and offered by different companies, hence broader and accurate consumer profiles are constructed.

DESCRIPTION OF DRAWINGS - The figure shows the schematic representation

of communication arrangement.

Alerting Abstract WO A1
NOVELTY - Method of controlling the establishment of a communications session with a party consists in receiving a first user identification symbol specifying the party, mapping the symbol to an index identifying user profile information, accessing the user profile information by using

the index and controlling the session as a function of the user profile information. A second user identification symbol different from the first is received and a determination is made that it maps to the same index as the first user identification symbol. Mapping is performed by consulting a list and an entry is made in the list to establish a relationship of the first user identification symbol with the next.

USE - Method is for Internet communications and voice-over-data transport.

DESCRIPTION OF DRAWINGS - The figure shows how **alias** information can be stored and applied.

Title Terms/Index Terms/Additional Words: CONTROL; ESTABLISH; COMMUNICATE; SESSION; MAP; USER; IDENTIFY; SYMBOL; PROFILE; INDEX

...multiple alternative symbolic names (300). User Profile information for a given party maybe maintained in **the system to** control features **and** routing behavior (320) in response to session request involving the party. By virtue of a **mapping** capability, one **or** more symbolic names may be associated with the same user profile information. A session request

involving any of the alternative names for a party will evoke the same user profile.

Claims:
...profile information;controlling the establishment of the communication session as a function of the user **profile** information corresponding to the party.

Alerting Abstract WO A2

NOVELTY - A **profile** related to a unique identifier based on the user's **activity** and **responses** in the closed network or system are generated or maintained. The **profile** is used to market products, services or information to the user. The user's identity is never revealed to a part of the closed network or system. Identity-revealing transactions involving the products, services or information can occur only outside the closed network or system.

DESCRIPTION - INDEPENDENT CLAIMS are included for:

1.a computer program product

2.a system for matching anonymous user with information

USE - In a computer-implemented system for having anonymous transaction-related activities and user classification performed in a closed or restricted data network, particularly on the Internet.

ADVANTAGE - Enables a user to log into a Web site within a closed network anonymously, have the user be profiled without revealing the user's real identity, having the system gather information about such anonymous user, and having the system create and maintain a user profile for such anonymous user. Allows for a system of representational or tokenized value which can be utilized in transactions independently initiated by the user outside the **closed** system, in which the user's real identity can never be linked to the original profile.

DESCRIPTION OF DRAWINGS - The drawing illustrates the basic steps to employ the features of an anonymous trust provider according to the present invention.

Alerting Abstract WO A1

NOVELTY - Identifier is obtained representing one or more **users** of a computer network. **Anonymous identifier** is created using the obtained identifier. Data being transmitted across the computer network is collected and associated with the **anonymous identifier** to create a **transaction** record. **Transaction** record is stored in a database.

DESCRIPTION - INDEPENDENT CLAIMs are also included for the following:

1. Method for associating **anonymous identifiers** .
2. Computer system with stored software implementing the method.

USE - For obtaining information on Internet users to improve marketing of products and services.

ADVANTAGE - Collects computer network traffic, particularly Internet traffic, in a manner that does not associate personally identifiable information with network usage data, and **creating** online **behavior profiles** that are unassociated with individual users.

DESCRIPTION OF DRAWINGS - The diagram shows users connected to a Point-Of-Presence (POP) Internet Service Provider, which is in turn connected to the Internet, and then illustrated connected typically to an ISP which connects to a Web server

108 network
104 Internet
107 authentication server

Alerting Abstract WO A2

NOVELTY - The system includes a central and private consumer repository containing several true consumption profiles corresponding to several consumers. Each of the true consumption profiles is anonymous. A central product repository contains consumption object profiles for several consumption objects. A correlator correlates parameters of a potential target consumption object with parameters of a given consumer's true consumption profile and identifies at least one best matched consumption object. An element confidentially presents the consumer with the profile of the at least one best-matched consumption object.

The correlator is triggered automatically.

DESCRIPTION - INDEPENDENT CLAIMS are included for a method for anonymously matching consumption objects with a consumer's consumption behaviour and for a central repository.

USE - For anonymously matching products or services with a consumer.

ADVANTAGE - Fully anonymous database supports vendors of goods and services in their product development and market research. Customer's identity remains private.

DESCRIPTION OF DRAWINGS - The figure shows the system.

Alerting Abstract WO A2

NOVELTY - A Mediation Server receives raw location positioning data from the wireless communications network and sends standardized location positioning data with encrypted unique identifiers to the Profiling Server.

DESCRIPTION - The Profiling Server tracks and profiles current and historical location positioning data, **compiling** databases of anonymous user **profiles** to permit targeting of personalized and relevant data.
USE - For the passive location positioning of wireless handsets for the purposes of delivering targeted data to users in a wireless communications network.
ADVANTAGE - Protects the privacy of the users. Privacy is achieved by separation of data collection and message transmission functions from the profiling and targeting functions.
DESCRIPTION OF DRAWINGS - The drawing shows a schematic diagram of the nodes in the network.

Alerting Abstract WO A2

NOVELTY - The profiles are provided to several web sites. Then, the web sites accessed by the users or clients (10) are monitored. The profile of the user is developed, based on the profiles of the web sites accessed by the user.

DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

1.Computer for profiling web user;

2.System for profiling web user;

3.System for inferring a profile of person;

4.Computer readable medium

USE - For selectively delivering contents e.g. advertisements to user based on their profiles.

ADVANTAGE - Enables usage of feedback from users to determine the effectiveness of advertising campaign. Allows dynamic modification of advertising campaign, by altering the target audience to optimize results.

DESCRIPTION OF DRAWINGS - The figure shows the block diagram of representative network of web user profiling system.

Alerting Abstract EP A1

NOVELTY - The method involves automatically creating an encrypted identification of a user. A web site operating computer is enabled to dynamically access the user information together with only the encrypted user identification while user is connected with the web site.

USE - For communicating web server user information while shielding the true identity of the user from the web site server.

ADVANTAGE - Allows automatically creating an **alias** identification for the **user** that is provided for the web site operator related to the actual identity of the user and in association with demographic and other non identification information concerned the actual user.

DESCRIPTION OF DRAWINGS - The drawing shows a flowchart of the preferred method of communicating in accordance with the method of the present invention.

Alerting Abstract US A

The method involves generating a **user pseudonym** confidentially at a proxy server, unique to the user, by authenticated user credentials provided by an authenticating entity. An user target **profile** summary indicating the user's access **patterns** are mapped to target objects and sets of target object characteristics to the **user pseudonym** .

Access by the user is enabled to the target objects and the sets of target object characteristics stored on an electronic storage media via the user target profile interest summary associated with the **user** 's **pseudonym** . The target objects and sets of target object characteristics are confidentially routed to the user.

ADVANTAGE - Organizes efficient distribution of information in a large scale system containing many users interconnected by a communication network. Preserves user's preferences confidentially. Reduces time and energy required for information retrieval.

English Abstract
A technique is disclosed in the context of a communications system whereby parties accessible through the system may be referenced by multiple alternative symbolic names (300). User Profile information for a given party maybe maintained in the system to control features and routing behavior (320) in response to session request involving the party. By virtue of a mapping capability, one or more symbolic names may be associated with the same user profile information. A session request involving any of the alternative names for a party will evoke the same user profile.

French Abstract
L'invention concerne une technique a mettre en oeuvre dans le contexte d'un systeme de communications. Grace a cette technique, des parties pouvant etre accedees via le systeme peuvent etre referencees par plusieurs noms symboliques alternatifs (300). Des informations relatives au profil utilisateur destinees a une partie donnee peuvent etre conservees dans le systeme, en vue de controler des caracteristiques et d'acheminer un comportement (320), en reponse a une demande de session impliquant la partie. En raison d'une capacite d'acheminement, un ou plusieurs noms symboliques peuvent etre associes avec les memes informations relatives au profil utilisateur. Une demande de session impliquant un nom alternatif quelconque destine a une partie evoque le meme profil utilisateur.

English Abstract
Monitoring subscriber viewing interactions such as television viewing interactions and generating viewing characteristics therefore. Generating at least one type of subscriber profile (550, 555) from at least some subset of subscriber characteristics including viewing, purchasing, transactions, statistical, deterministic, and demographic. The subscriber characteristics may be generated, gathered from at least one source, or a combination thereof. Forming groups of subscribers by correlating at least one type of subscriber profile. The subscriber groups (580) may

correlate to elements of a content delivery system (such as head-ends, nodes, branches, or set top boxes (STBs) within a cable TV system). Correlating ad profiles to subscriber/subscriber group profiles (545) and selecting targeted advertisements for the subscriber/subscriber groups based on the correlation (540). Inserting the targeted ads in place of default ads in program streams somewhere within the content delivery system (head-end, node, or STB). Presenting (545, 560, 570, 580) the targeted ads to the subscriber/subscriber group via a television.

French Abstract
Surveillance d'abonnes visionnant des interactions telles que des interactions de visionnage de television et generation de caracteristiques de visionnage a cet effet. Generation d'au moins un type de profil d'abonne (550, 555) a partir de l'un au moins des sous-ensembles de caracteristiques d'abonne et notamment les caracteristiques de visionnage, d'achat, de transactions, ainsi que les caracteristiques statistiques, deterministes et demographiques. Les caracteristiques d'abonnes peuvent etre generees et/ou recueillies a partir de l'une au moins des sources. Formation de groupes d'abonnes par correlation d'au moins un type de profil d'abonne. Les groupes d'abonnes (580) peuvent avoir des correlations avec des elements d'un systeme de remise de contenu tel que les tetes de reseau, les noeuds, les embranchements ou les boitiers de raccordement dans les limites d'un systeme de cablodistribution. Correlation de profils d'annonces publicitaires avec des profils d'abonnes ou de groupes d'abonnes (545) et selection d'annonces ciblees pour l'abonne ou les groupes d'abonnes sur la base de la correlation (540). Insertion des annonces publicitaires ciblees en remplacement des annonces implicites dans les flux des programmes, quelque part dans les limites du systeme de remise de contenus (tete de reseau, noeud ou boitier de raccordement). Presentation (545, 560, 570, 580) des annonces publicitaires ciblees a l'abonne ou au groupe d'abonnes via une television.

English Abstract
Transaction processing of online transactions (121) at merchant sites (102) determines the likelihood that such transactions are fraudulent, accounting for unreliable fields of a transaction order, which fields do not reliably identify a purchaser (127). A scoring server (114) using statistical model use multiple profiles, along with weights to indicate the degree to which the profiles identify the purchaser of the transaction (129).

French Abstract
Le traitement de transactions en ligne (121) a des sites marchands determine si ces transactions sont susceptibles d'etre frauduleuses, prenant en compte des champs non fiables d'un ordre de transaction, lesquels champs n'identifient pas de maniere fiable un acheteur (127). Un serveur de pointage (114) utilisant un profil multiple d'utilisation de modele statistique, ainsi que des coefficients de ponderation pour indiquer le degre auquel les profils identifient l'acheteur de la transaction (129).

French Abstract
Les donnees de profils utilisateurs sont compilees par plusieurs agregateurs, qui dans l'execution presente de l'invention sont des sites du web. Lorsqu'un consommateur communique avec un agregateur, ce dernier lui pose des questions auxquelles il est libre de repondre ou non. Les reponses donnees sont transmises a un centre d'archivage des profils ou elles constituent des elements de profils types d'utilisateurs. Lesdites reponses sont marquees a l'aide d'un identificateur propre a l'agregateur. L'agregateur peut etre remunere pour sa tache de compilation des donnees sur le consommateur et pour leur transfert au centre d'archivage. Si l'utilisateur visite le diffuseur, il peut prendre connaissance les messages cibles tels que des annonces publicitaires et intervenir dans leur redaction. Cette intervention ainsi que celle du diffuseur du message est retribuee.

English Abstract
The present invention relates to a system and method for the passive location positioning of wireless handsets for the purposes of delivering targeted data to users in a wireless communications network while protecting the privacy of the users. The network may contain a plurality of clusters comprising at least two physical nodes communication with each other via a remote link. The first node, the Mediation Server, receives raw location positioning data from the wireless communications network and sends standardized location positioning data with encrypted **unique identifiers** to the second node, the Profiling Server. The Profiling Server tracks and profiles current and historical location positioning data, **compiling** databases of **anonymous user profiles** to permit targeting of personalized and relevant data. The Profiling Server targets data to users with matching profiles and forwards those messages to the Mediation Server for encryption and further message compilation and transport. Privacy is achieved by separation of data collection and message transmission functions from the profiling and targeting functions. The present invention also concerns a method of anonymizing data related to a wireless transceiver.

French Abstract
La presente invention se rapporte a un systeme et a un procede de localisation passive de combines telephoniques sans fil permettant de distribuer des donnees ciblees a des utilisateurs dans un reseau de telecommunication sans fil tout en protegeant la vie privee des utilisateurs. Le reseau peut contenir une pluralite de groupes comportant au moins deux noeuds physiques communicant l'un avec l'autre par l'intermediaire d'une liaison exterieure. Le premier noeud, le serveur de mediation, recoit des donnees de localisation brutes du reseau de communication sans fil et envoie des donnees de localisation normalisees associees a des identificateurs uniques chiffres vers le second noeud, le serveur d'etablissement de profils. Ce serveur d'etablissement de profils suit et etablit le profil des donnees de localisation actuelles et passees, en compilant des bases de donnees de profils d'utilisateurs anonymes pour permettre le ciblage de donnees personnalisees et pertinentes. Le serveur d'etablissement de profils cible les donnees sur des utilisateurs ayant des profils adaptes et transmet ces messages au serveur de mediation en vue de leur chiffrage, d'une compilation ulterieure des messages et de leur transport. La separation des fonctions de collecte des donnees et de transmission des messages et des fonctions d'etablissement de profils et de ciblage permet de respecter la vie privee des utilisateurs. La presente invention se rapporte en outre a un procede permettant de rendre anonymes les donnees associees a emetteur-recepteur sans fil.

English Abstract
A client (106) accesses a content serving site (102) and information from this access is passively gathered by the content serving site (102). The information obtained from the client may be used to intelligently select content, such as advertisements, to include with the content accessed by the client. When a client (106) initially arrives, the client is assigned a unique anonymous identifier and an entry is created in a database (107). As the client (106) moves around the content serving site (102), the client's profile is updated in the database (107) based on the clients actions. The stored information can be analyzed and provided to Internet service provides (ISP) to provide better service to their clients. Additionally, the information regarding client preferences can be used to alter the content of the information provided to the client (106) in real time using a database that stores context information for each page of the content serving site (102) and context information for each potential page from which the client (106) can be referred.

French Abstract
La presente invention concerne un systeme dans lequel un client accede a un site serveur de contenu (102), l'information provenant de cet acces etant rassemblee passivement par ce site (102). L'information obtenue sur le client peut etre utilisee afin de choisir un contenu de maniere intelligente, tel que des annonces, a inclure dans le contenu auquel le client accede. Lorsqu'un client (106) accede pour la premiere fois, on lui attribue un identifiant anonyme unique, puis une entree dans une base de donnees (107) est creee. Au fur et a mesure que le client (106) se deplace autour du site serveur de contenu (102), son profil est mis a jour dans la base de donnees (107) en fonction de ses actions. L'information stockee peut etre analysee et communiquee a des fournisseurs de service Internet (ISP) leur permettant d'offrir a leurs clients de meilleurs services. En outre, l'information concernant des preferences client peuvent etre utilisees afin de changer le contenu de l'information communiquee en temps reel au client (106) par l'utilisation d'une base de donnees qui stocke une information de contexte pour chaque page du site serveur de contenu (102) et une information de contexte pour chaque page potentielle a partir de laquelle le client (106) peut etre designe.

English Abstract
The Location Enhanced Information Delivery System Architecture (LEIA) customizes the information that is displayed to an information recipient based on optimizing a match between information purveyors, such as advertisers, and the information recipients who are local to an information delivery system. The present location enhanced information delivery system presents the information most suited to the real current audience, as measured by location information systems, rather than to a static predicted audience. While the preferred embodiment discloses a beaconing-style wireless technology, the system concept is easily extensible both to other location-information systems, such as license-plate scanning with cameras, and to utilizing the location-information for private displays of information in addition to public displays of information.

French Abstract
L'invention concerne l'architecture d'un systeme ameliore de distribution d'informations de localisation (LEIA). Ce systeme sert a personnaliser les informations affichees chez un destinataire d'informations en optimalisant une correspondance entre des fournisseurs d'informations, tels que des annonceurs publicitaires, et des destinataires se trouvant au voisinage d'un systeme de distribution d'informations. Ce systeme ameliore de distribution d'informations de localisation actuelle presente les informations les plus adaptees a l'audience actuelle reelle, comme l'ont mesure des systemes d'informations sur la localisation, par opposition a une audience fixe prevue. Alors qu'un mode de realisation prefere comprend une technologie sans fil de type balisage, le concept de ce systeme peut facilement s'etendre a d'autres systemes d'informations de localisation, tels que des dispositifs de balayage de plaques d'immatriculation a l'aide de cameras, tout comme a l'utilisation d'informations de localisation pour des affichages d'informations prives en plus des affichages d'informations publics.

English Abstract

This invention relates to customized electronic identification of desirable objects, such as news articles, in an electronic media environment, and in particular to a system that automatically constructs both a "target profile" for each target object in the electronic media based, for example, on the frequency with which each word appears in an article relative to its overall frequency of use in all articles, as well as a "target profile interest summary" for each user, which target profile interest summary describes the user's interest level in various types of target objects. The system then evaluates the target profiles against the users' target profile interest summaries to generate a user-customized rank ordered listing of target objects most likely to be of interest to each user so that the user can select from among these potentially relevant target objects, which were automatically selected by this system from the plethora of target objects that are profiled on the electronic media. Users' target profile interest summaries can be used to efficiently organize the distribution of information in a large scale system consisting of many users interconnected by means of a communication network. Additionally, a cryptographically-based pseudonym proxy server is provided to ensure the privacy of a user's target profile interest summary, by giving the user control over the ability of third parties to access this summary and to identify or contact the user.

French Abstract

La presente invention concerne un systeme d'identification electronique personnalisee d'objets recherches, tels que des articles de presse, dans un environnement de supports electroniques. L'invention concerne en particulier un systeme qui construit, d'une part un "profil cible" pour chaque objet dans le support electronique, en partant, par exemple, de la frequence de chaque mot dans un article par rapport a sa frequence d'ensemble pour tous les articles, et d'autre part un "resume d'interets de profils cibles", concernant chaque utilisateur, et decrivant le niveau d'interet de l'utilisateur par rapport a differents types d'objets cibles. Le systeme compare ensuite les profils cibles avec les resumes

d'interets de profils cibles des utilisateurs afin de generer une liste, classee selon les desiderata de l'utilisateur, et concernant les objets cibles les plus susceptibles de presenter de l'interet pour chacun des utilisateurs. Cela permet a chaque utilisateur de faire un choix parmi les objets cibles eventuellement interessants qui ont ete selectionnes automatiquement par ce systeme a partir d'une quantite plethorique d'objets pour lesquels il existe un profil sur le support electronique. Les resumes d'interets de profils cibles permettent d'organiser efficacement la distribution de l'information dans un systeme a grande echelle rassemblant un grand nombre d'utilisateurs interconnectes entre eux par un reseau de communication. De plus, le systeme dispose d'un serveur pseudonyme d'interface a vocation cryptographique assurant la non divulgation du resume d'interets de profils cibles d'un utilisateurs, et donnant a l'utilisateur la possibilite d'autoriser des tiers a avoir acces a son resume d'interets de profils cibles et d'identifier l'utilisateur ou de prendre contact avec lui.

ABSTRACT EP 938068 A2
A system and method for performing an electronic transaction, including registration, audit and trusted recovery features. A transaction request message is received from a registered user that includes an unblinded validated certificate, and a blinded unvalidated certificate. If the unblinded validated certificate is determined to be legitimate, then a transaction can be performed, and the blinded unvalidated certificate is validated to obtain a blinded, validated certificate that is sent to the user. An audit protocol can be used to further verify the legitimacy of the transaction request message, and a user can recover from a broken connection by replaying a protocol run.

ABSTRACT EP 855659 A1
For use with a network having server sites capable of being browsed by users based on identifiers received into the server sites and personal to the users, alternative proxy systems for providing substitute identifiers to the server sites that allow the users to browse the server sites anonymously via the proxy system. A central proxy system includes computer-executable routines that process site-specific substitute identifiers constructed from data specific to the users, that transmits the substitute identifiers to the server sites, that retransmits browsing commands received from the users to the server sites, and that removes portions of the browsing commands that would identify the users to the server sites. The foregoing functionality is performed consistently by the central proxy system during subsequent visits to a given server site as the same site specific substitute identifiers are reused. Consistent use of the site specific substitute identifiers enables the server site to recognize a returning user and, possibly, provide personalized service.

English Abstract
A chat room is broadcast in an interactive television environment for lurking "in" a chat room, without the need for establishing a back channel connection. The present invention provides a mode of chat room broadcasting and communication that can be easily handled by a client device, typically a set top box (STB) processor, an interactive television server and its subscriber clients. The present invention broadcasts chat rooms to clients who may either connect through a back channel to participate in a chat room or simply lurk, that is, to watch the chat room content and discussion in the broadcast without participating or registering in the chat room.

French Abstract
Un bavardoir est diffuse dans un environnement interactif de television pour "badauder" sans avoir a etablir une connexion sur un canal arriere. L'invention presente un mode de diffusion et de communication facile a exploiter par un dispositif de client, normalement par un processeur de decodeur, un serveur interactif de television et ses abonnes; elle diffuse des bavardoirs aux clients qui peuvent soit se connecter sur un canal arriere pour se joindre au bavardoir, ou simplement badauder c.-a-d. se placer en observateur sans participer ni enregistrer.

English Abstract
A system and method manages user privacy in a network environment (100) through a distributed user system including a user device (110) adn profile operator (115). The management of user privacy involves recognizing one or more service opportunities of a service operator (130, 140) on a user device (110) operated by a user, determining a privacy level at which communications is conducted with a service operator (130, 140) relating to the one or more service opportunities on the user device (110), determining a profile access level on the user device (110), transmitting the profile access level to the service operator (130, 140), and enabling the service operator (130, 140) to obtain a subset of

profile information of the user according to the profile access level.

French Abstract
L'invention concerne un systeme et un procede permettant de gerer la confidentialite de l'utilisateur dans un environnement de reseau (100), par l'intermediaire d'un systeme utilisateur distribue. Ce systeme comprend un dispositif utilisateur (110) et un operateur de profils (115). La gestion de la confidentialite de l'utilisateur consiste a reconnaitre au moins une possibilite de service d'un operateur de services (130, 140) sur un dispositif utilisateur (110) exploite par un utilisateur, a determiner le niveau de confidentialite auquel les communications concernant au moins une possibilite de service sur le dispositif utilisateur (110) sont realisees avec un operateur de services (130, 140), a determiner un niveau d'acces de profil sur le dispositif utilisateur (110), a transmettre ce niveau d'acces de profil a l'operateur de services (130, 140), et a permettre a ce dernier (130, 140) d'obtenir un sous-ensemble d'informations de profil de l'utilisateur en fonction du niveau d'acces de profil.

English Abstract
A system and method for transaction profiling (103) in a privacy-protected manner (915), wherein the transaction generally refers to an intentional action by a user. For example, in the context of television programming, the transaction data may relate to programming and advertisements watched by the user over a pre-determined period of time (905). A transaction profile vector (103) based on the evaluation of the recorded transaction data (905) is then computed, wherein the transaction profile vector may include demographic attributes such as probable age, household size, income level of the user, or preference attributes indicating probable products and services preferred by the user. To protect privacy, the generation of the transaction profile vector (also known as profile vector) preferably takes place local to the transaction (925).

French Abstract
La presente invention concerne un systeme et un procede permettant d'etablir des profils de transaction (103), avec une confidentialite protegee (915). La transaction se refere generalement a une action intentionnelle de l'utilisateur. Par exemple, dans le contexte de la programmation televisuelle, les donnees de transaction peuvent concerner la programmation et les annonces regardees par l'utilisateur sur une periode de temps predefinie (905). Un vecteur de profil de transaction (103), base sur l'evaluation des donnees de transaction enregistrees (905), est ensuite calcule. Ce vecteur de profil de transaction peut comprendre des caracteristiques demographiques, telles que l'age probable, la taille du menage et le niveau de revenu de l'utilisateur, ou des caracteristiques de preference, indiquant des produits et des services probables, preferes par l'utilisateur. Afin de proteger la confidentialite, la generation du vecteur de profil de transaction (egalement connu sous le nom de vecteur de profil) a de preference lieu localement par rapport a la transaction (925).

English Abstract
Protecting a database against the deduction of confidential values contained therein is accomplished by partitioning the database into public and private values (202), some of which public values are deemed more important than others (203). The private attribute values are electronically processed (204-226) to reduce any high correlation between the public values and the private values. Specifically the processor partitions the database (204-210) into safe tuples and unsafe tuples, which unsafe tuples have high correlative public values (216-218). The processor then selectively combines the public attribute values of the tuples (220) to camouflage such tuples from deduction of their private attribute values beyond a threshold level of uncertainty (226).

French Abstract
Cette invention se rapporte a la protection d'une base de donnees contre la deduction de valeurs confidentielles contenues dans ladite base de donnees. On parvient a proteger les valeurs confidentielles en procedant a un decoupage de la base de donnees en partitions de valeurs publiques d'une part et en partitions de valeurs privees (202) d'autre part, certaines des valeurs publiques etant estimees plus importantes que d'autres (203). On traite electroniquement (204-226) les valeurs d'attributs prives de facon a reduire toute correlation elevee entre les valeurs publiques et les valeurs privees. De maniere specifique, le processeur effectue une partition de la base de donnees (204-210) en

lignes protegees et en lignes non protegees, ces lignes non protegees ayant des valeurs publiques a correlation elevee (216-218). Le processeur combine ensuite selectivement les valeurs des attributs publics de ces lignes (220) de facon a dissimuler ces lignes pour eviter la deduction de leurs valeurs d'attributs prives au-dela d'un niveau seuil d'incertitude (226).

English Abstract
An individualized promotional programming network has a number of retail establishments (78), each including at least one checkout station (20) operable to identify products presented by a customer for purchase. An audiovisual display (50), preferably with moving picture video, is disposed at the checkout (20) and viewed by the customer. Varied programs can be displayed, at least some of their subject matter relating to product promotion. An input device (62) such as a touch screen allows the customer to input preferences. Programs are selected for display based on the customer preferences, a stored customer profile, and the identity of the products, the profile being updated as needed. The profile can be modified and/or updated in view of the nature of the products presented for purchase, which are typically scanned for UPC codes.

French Abstract
Un reseau de programmation de promotions commerciales individualisees dessert plusieurs magasins de vente au detail (78) dont chacun est dote d'au moins une caisse enregistreuse (20) permettant d'identifier les produits qu'un client desire acheter. Le client peut regarder un affichage audiovisuel (50), comportant de preference une image video mobile, place a la caisse (20). On peut y voir differents programmes dont la teneur concerne au moins partiellement la promotion de produits. Un dispositif d'entree (62), tel qu'un ecran tactile, permet au client d'indiquer ses preferences qui regissent alors le programme affiche, lequel depend aussi d'un profil de client memorise et des caracteristiques des produits. On peut modifier et/ou mettre a jour ce profil en tenant compte de la nature des produits mis en vente qui font l'objet d'un code uniforme de produit (CUP) permettant la lecture optique d'un code a barres.

ABSTRACT:
Debate arises over whether communications on Internet should be traceable in some circumstances; behind the debate are new technologies that enable even casual Internet users to be anonymous on line and other technologies that gather ever more personal data from users; photo; drawing (M)

TEXT:
WASHINGTON, April 7 - He did his best to remain anonymous, but within days after an expert programmer released the Melissa computer virus into the world late last month, the police reported that his identity had been cracked. Investigators used a tracking mechanism the Microsoft Corporation had secretly installed in its Office software to gather information on its customers surreptitiously.

In Yugoslavia, meanwhile, messages poured onto the Internet from the war zone, providing what appeared to be firsthand accounts of Serbian atrocities against ethnic Albanians in Kosovo. Privacy advocates realized that if the Serbian authorities were able to trace the identities of the writers, many lives could be lost. Ominously, messages from some writers

had stopped suddenly.

The privacy groups moved swiftly to provide the writers with special access to Anonymizer.com, an Internet service that allows users to be anonymous and untraceable on line, and with information about PGP, a data encryption program so strong that the United States prohibits its export.

These two cases, worlds apart, underscore a growing dilemma that now confronts the electronic world. "Anonymity has incontestable value in a huge number of situations, and it is constitutionally protected," said Philip Reitinger, a prosecutor for the Justice Department, speaking at a Computers, Freedom and Privacy conference here today. Moments later, during a panel discussion, he added, "If you're serious about prosecuting crime on the global communications infrastructure, you have to have traceability.

"Should communications on the Internet be traceable in some circumstances? And if so, what should the rules be?"

The issue is a broad one because anonymity is not of interest only to criminals and dissidents, and not available only to the technically astute. New technologies are emerging that enable even casual Internet users to be anonymous on line for the first time. At the same time, new technologies are being deployed to gather ever more personal information from users.

In recent weeks, a debate has emerged over new technologies that have been deployed to allow companies to track individual users on the Internet. The Intel Corporation embedded a unique identification number in its Pentium III processor that would enable network operators to identify individual computers on the Internet, and the Microsoft Corporation designed a "globally unique identifier" that secretly appears in Microsoft Office documents and can be used to trace files back to a specific person. The Microsoft Office identification number was used in the Melissa investigation.

Some privacy tools are being simplified and made available commercially to a broad audience, allowing anyone to browse the World Wide Web and use E-mail without being identified. The technologies are morally neutral. They could be used, for example, to commit a crime or to report one anonymously. The tools, like the Anonymizer (www.anonymizer .com), are also useful simply for browsing the Web without having to give up personal information to marketers, for visiting sex-related Web sites without potential embarrassment, posting messages on newsgroups using pseudonyms and for avoiding spam, the bulk-mail advertising pitches that advertisers send incessantly to E-mail addresses they have culled from the Net.

"The Internet has shifted the balance away from privacy, and these are attempts to bring it back," said David Banisar, an officer of the Electronic Privacy Information Center (www.epic.org).

There are other anonymity systems in the works. At AT&T Labs-Research in New Jersey, a system called Crowds is being tested that operates on the premise, familiar to any New Yorker, that one can be anonymous in a crowd. In the Crowds system, large groups of geographically dispersed Internet users would be able to band together and their individual Web page requests would be randomly forwarded through a shared computer called a proxy server. The operator of the Web site would not know which member of the crowd submitted the request, and neither would anyone else in the crowd. More information is available at www.research.att .com/projects/crowds.

At the Lucent Corporation's Bell Labs, another anonymity system called the Lucent Personalized Web Assistant allows a Web **user** to create a **pseudonym** for each Web site; the same pseudonym would be used on each visit. The Web site operator would not know the visitor's true identity but could still **build** a **profile** of the user's preferences that could be used to tailor advertisements and content to the customer on subsequent visits. More information about Lucent's system is available at www.bell-labs.com/project/lpwa.

Yet another anonymity system under development, this one at the Government's Naval Research Laboratory, is Onion Routing. An Onion Router (www.onion-router.net) hides not only the content of messages, but also the very fact that two people are communicating over a public network.

One of the more intriguing anonymity services under development is Freedom, a Windows program developed by a Canadian company, Zero Knowledge

Systems (www
.zeroknowledge.com). Freedom, which is expected to be available for public testing next month, is similar to the Lucent system in that it enables users to establish pseudonyms that are consistent over time. That would allow a user to participate freely in a discussion group without worrying about being identified.

Freedom is expected to cost $50 a year for five separate digital pseudonyms (extra identities are $10 a year). These on-line personas cannot be traced to reveal the user's identity.

The technical details of the system, including strong data encryption, masked Internet addresses and proxy servers, are hidden behind a simple user interface, which I've tried in early form. After a user chooses a persona by clicking on it, all identifying information is stripped from the original request and replaced by the information created for the pseudonym.

Millions of Internet users already employ pseudonyms; America Online, for example, calls them screen names and allows each subscriber to have several. But in most cases a pseudonym can be traced to its real owner, often when the Internet company is compelled by a court order to divulge the information or is tricked into doing so.

For example, the giant defense contractor Raytheon Corporation sued more than 20 employees earlier this year for posting pseudonymous messages about the company on the Internet. At least two employees resigned after Yahoo, in response to a court subpoena, revealed the true identities behind the postings. Raytheon asserts that the messages, which contained gossip and criticisms of the company, divulged proprietary and confidential information.

With Freedom, not even Zero Knowledge Systems can link the pseudonyms to a user's real identity. The company knows only that the person has a Freedom account.

The oldest commercial service offering anonymity, and the only one currently available to users of any Internet-connected computer, is Anonymizer.com. Unlike Freedom, Anonymizer does not require the user to download or install any special software. For a fee of $5 a month, users

can process Web browsing requests and send messages through Anonymizer's proxy servers. (There is also an unlimited free browsing service, but Anonymizer inserts a delay, typically 10 seconds, on page views in the free service. The paid service has no delays.) For an extra fee, Anonymizer will also allow users to receive E-mail responses and set up Web pages.

In either case, the user types the address of the Web site to be visited, and the request is sent to Anonymizer's proxy computer. The proxy strips off the customer's identifying information and forwards the request to the Web site, which knows only that the request is coming from Anonymizer. The page or graphics file is then returned to the user's computer, and the site can be bookmarked for return visits with the anonymity intact.

If a company is tracking Web usage by its employees -- which the courts have ruled is legally permissible, along with reading employees' E-mail and listening to their phone calls -- it will see only that the user is connected to Anonymizer.com, but it will not be able to find out what sites are being visited. For that reason, a number of companies prohibit employee access to the Anonymizer site. Other companies use Anonymizer regularly to visit the Web sites of competitors and gather information, and law enforcement agencies use it routinely to check up on people under investigation.

At the other end of the line, some commercial sites do not allow connections from Anonymizer, either because they require visitors to provide personal information before granting them access or because they have had bad experiences with Anonymizer users who abused the system with bogus credit card scams or harassing messages. Anonymizer was forced to block its users' access to the White House Web site because customers were sending threats to the President.

Anonymizer boots out customers who try to use the system to send batches of spam, or in response to complaints from people being harassed

through the site.

As with all of the anonymous services now being developed for the Internet, the good has to be balanced with the bad. "The real world is routinely anonymous," said Lance Cottrell, Anonymizer's chief executive. "When you drive down the street, typically there is no one photographing your license plate, no one keeping track of where you park and how long you stay. What's unusual about the Internet is that everything is by default logged and tracked. What's aberrant is not the presence of anonymity on the Internet, but that you have to take special steps to achieve it."

AUGMENTED TITLE: Freedom from Zero Knowledge Systems
Foust, Jeff;
Technology Review (Cambridge, Mass.: 1998) v. 103 no2 (Mar./Apr. 2000) p.
30
DOCUMENT TYPE:  Feature Article ISSN:  1099-274X

ABSTRACT:  Zero Knowledge Systems' Freedom software lets Internet users
keep their  activities  private.  Firms can combine information voluntarily
submitted by users with data automatically transmitted by a user's Web
browser and other software to  build  a detailed  profile  of an
individual.  In December, the Montreal-based Zero Knowledge Systems
unveiled Freedom, which uses advanced encryption software to hide the true
identity of an Internet  user  behind a  pseudonym  that no one other than
the user knows.  Freedom users download the client software from <
http://www.freedom.net > and install it on their computer and for an annual
fee of $49.95 can register five separate identities, or "nyms.".

English Abstract
The present invention provides a system and method for creating and maintaining a Biomedical document database, wherein the documents have been reviewed by biomedical and other experts, who have assigned taxonomic based indicia to each document wherein a specialized search engine can rapidly retrieve relevant documents based upon the commonly known taxonomy.

French Abstract
Cette invention se rapporte a un systeme et a un procede servant a creer et a entretenir une base de donnees de documents biomedicaux, dans laquelle les documents ont ete revises par des specialistes de biomedecine et par d'autres experts, qui ont attribue a chaque document des indices taxonomiques, pour qu'un moteur de recherche specialise puisse rapidement retrouver les documents pertinents sur la base de la taxonomie la plus connue.

Legal Status (Type, Date, Text)
Publication 20020131 A2 Without international search report and to be republished upon receipt of that report.
Search Rpt 20040401 Late publication of international search report
Republication 20040401 A3 With international search report.
Republication 20040401 A3 Before the expiration of the time limit for amending the claims and to be republished in the event of the receipt of amendments.

Alerting Abstract WO A2

NOVELTY - A profile related to a unique identifier based on the user's activity and responses in the closed network or system are generated or maintained. The profile is used to market products, services or information to the user. The user's identity is never revealed to a part of the closed network or system. Identity-revealing transactions involving the products, services or information can occur only outside the closed network or system.

DESCRIPTION - INDEPENDENT CLAIMS are included for:

1.a computer program product

2.a system for matching anonymous user with information

USE - In a computer-implemented system for having anonymous transaction-related activities and user classification performed in a closed or restricted data network, particularly on the Internet.

ADVANTAGE - Enables a user to log into a Web site within a closed network anonymously, have the user be profiled without revealing the user's real identity, having the system gather information about such anonymous user, and having the system create and maintain a user profile for such anonymous user. Allows for a system of representational or tokenized value which can be utilized in transactions independently initiated by the user outside the closed system, in which the user's real identity can never be linked to the original profile.

DESCRIPTION OF DRAWINGS - The drawing illustrates the basic steps to employ the features of an anonymous trust provider according to the present invention.
